

i:Calc – Wastewater Calculator

Improve customer service, and proactively manage billing expectations while helping local industries, businesses and area residents better understand their wastewater billing.

Wastewater Calculator Features:

Calculate Consumption

With a user friendly interface, Wastewater Calculator users can easily determine water and wastewater consumption for a specified period or forecast billing based on different usage scenarios.

Self-Serve

Residents, businesses or local industries can enter water meter readings and length of time; the water consumption field will automatically populate. The application then presents key factors and calculations including base charges, rates applied to usage, and accurate, bottom-line totals consumers can expect on their next bill.

Customize to Specific Needs

The calculator can be easily customized to specific municipal variables. Choose your own requisite fields and drop-down menu changes, including last reading, current reading, consumption, length of time, number of months to bill, and more, to gather or present the information you prefer.

The Municipal Wastewater Calculator makes it easy for designated site administrators to update the values and rates of the calculations.

Access

Choose the level of access to the tool: Make it publicly available or require a secure log-in.
